

## **Table of contents**

### **Part 1. Early postoperative management**

- 1: The normal postoperative cardiac patient
- 2: Risk prediction and outcome
- 3: Fast-tracking the low-risk patient
- 4: Resuscitation in the cardiac intensive care setting
- 5: Myocardial ischaemia and infarction
- 6: Bleeding
- 7: Postoperative hypotension
- 8: Glucose, lactate, and acid-base
- 9: Postoperative medications
- 10: Information handover and care planning

### **Part 2. Organ dysfunction**

- 11: Heart
- 12: Lung
- 13: Kidney
- 14: Gut
- 15: Nervous system
- 16: Immune system
- 17: Haematology

### **Part 3. Specific patient groups**

- 18: The thoracic patient
- 19: The adult patient with congenital heart disease
- 20: The obstetric patient with cardiac disease
- 21: Heart failure resistant to standard medical therapy
- 22: The transplant patient
- 23: Acute cardiology

### **Part 4. Treatments and procedures**

- 24: Central venous cannulation, pulmonary artery catheter, and minimally invasive cardiac output monitoring
- 25: Airway management
- 26: Respiratory management
- 27: Circulatory support
- 28: Epicardial pacing
- 29: Sedation and pain relief
- 30: Wound management
- 31: Infection control and prevention
- 32: Bedside echocardiography
