

Table of Contents

Foreword

Preface

1. History of iron overload disorders
 2. Normal iron absorption and metabolism
 3. Iron toxicity
 4. Tests for hemochromatosis and iron overload
 5. Complications of hemochromatosis and iron overload
 6. Insulin resistance and iron overload
 7. Infection and immunity
 8. Classical and atypical hfe hemochromatosis
 9. Heterozygosity for hfe c282y
 10. Porphyrria cutanea tarda
 11. Mitochondrial mutations as modifiers of hemochromatosis
 12. Hemochromatosis associated with ferroportin gene (slc40a1) mutations
 13. Hemochromatosis associated with hemojuvelin gene (hjuv) mutations
 14. Hemochromatosis associated with hepcidin gene (hamp) mutations
 15. Hemochromatosis associated with transferrin receptor-2 gene (tfr2) mutations
 16. Iron overload associated with ire mutation of ferritin heavy-chain gene (fth1)
 17. Hereditary hyperferritinemia-cataract syndrome: ire mutations of ferritin light chain gene (ftl)
 18. Iron overload in native Africans and African Americans
 19. Hereditary atransferrinemia
 20. Divalent metal transporter-1 (dmt1) iron overload
 21. Iron overload associated with thalassemia syndromes
 22. Iron overload associated with hemoglobinopathies
 23. Iron overload associated with pyruvate kinase deficiency
 24. Iron overload associated with congenital dyserythropoietic anemias
 25. Hereditary sideroblastic anemias
 26. Pearson marrow-pancreas syndrome
 27. Acquired sideroblastic anemias
 28. Hereditary aceruloplasminemia
 29. Friedreich ataxia and cardiomyopathy
 30. Pantothenate kinase (pank2)-associated neurodegeneration
 31. Neuroferritinopathies
 32. Gracile syndrome
 33. Neonatal hemochromatosis
 34. Iron overload due to excessive supplementation
 35. Localized iron overload
 36. Management of iron overload
 37. Population screening for hemochromatosis
 38. Ethical, legal, and social issues
 39. Directions for future research
- Index.
