

Table of Contents

Section One: Principles of Pharmacology

1. Introduction
2. Pharmacodynamics: Mechanisms of Action
3. Pharmacokinetics and Drug Dosing
4. Adverse Drug Reactions Section Two: Autonomic and Cardiovascular Pharmacology
5. Drugs Acting on the Autonomic Nervous System
6. Antihypertensive Agents
7. Drug Therapy of Coronary Atherosclerosis and Its Repercussions
8. Drug Therapy for Congestive Heart Failure and Cardiac Arrhythmias Section Three: Treatment for Pulmonary and Gastrointestinal Disorders
9. Drug Therapy for Pulmonary Disorders
10. Drugs for Gastrointestinal Disorders Section Four: Pain Control
11. Anesthetic Agents
12. Drugs for the Treatment of Pain and Inflammation
13. Drug treatment for Arthritis Related Conditions Section Five: Endocrine Pharmacology
14. Selective Topics in Endocrine Pharmacology
15. Drug Treatment for Osteoporosis and Diabetes Section Six: Psychopharmacology
16. Drug Treatment for Depression and Anxiety
17. Drug Treatment for Schizophrenia and Bipolar Illness Section Seven: Drugs Affecting the Nervous System
18. Drugs for Epilepsy and Attention Deficit/Hyperactivity Disorder
19. Antispasticity Medications and Skeletal Muscle Relaxants
20. Pharmacologic Management of Degenerative Neurologic Disorders Section Eight: Drugs Affecting the Integumentary System
21. Integumentary System - NEW Section Nine: Infectious Disease
22. Antimicrobial Agents
23. Antiviral Agents and Selected Drugs for Fungal Infections Section Ten: Chemotherapeutic Drugs and Agents Acting on the Immune System
24. Chemotherapy and Immune Modulation Section Eleven: The Relationship between Drug Therapy and Exercise
25. The Interaction between Selective Cardiopulmonary and Diabetic Medications and Exercise Section Twelve: Special Topics
26. Nutrition and Pharmacology - NEW
27. Complementary and Alternative Medicine in Pharmacology - NEW
